

ENGINE COMPONENTS IDENTIFICATION

What is the function of the following engine components?

1. Camshaft ____
2. Intake manifold ____
3. Pistons ____
4. Carburetor ____
5. Distributor ____
6. Timing Cover ____
7. Ignition Coil ____
8. Oil Pump ____
9. Exhaust Valve ____
10. Cooling Fan ____
11. Crankshaft ____
12. Hydraulic Valve lifter ____
13. Radiator Hoses ____
14. Rocker Arm ____
15. Valve Cover ____
16. Throttle Body ____
17. Timing Belt ____
18. Flywheel ____

NAME _____

PERIOD _____

19. Starter/solenoid ____
20. Timing chain tensioner ____
21. Valve spring ____
22. Cylinder head ____
23. Vacuum advance ____
24. Oil Pan ____
25. Push Rods ____
26. Ignition wires ____
27. Cylinders ____
28. Alternator ____
29. Fuel Filter ____
30. Main and Rod bearings ____
31. Water pump ____
32. Air filter ____
33. Thermostat ____
34. Oil pressure relief valve ____
35. Engine block ____
36. Ignition Module ____
37. Battery ____
38. Connecting Rods ____
39. Spark Plugs ____
40. Fuel Pump ____
41. Intake Valves ____
42. Motor Mounts ____
43. Radiator ____
44. Exhaust Manifold ____
45. Oil Filter ____

ENGINE COMPONENTS IDENTIFICATION ANSWERS

- A. Pumps coolant through engine and radiator**
- B. Allows air/fuel into cylinder**
- C. Removes impurities from engine oil**
- D. Ensures timing chain has correct tension**
- E. Main unit of engine assembly containing cylinders**
- F. Controls amount of air entering intake manifold**
- G. Removes dirt from air entering engine**
- H. Routes high voltage sparks to spark plugs**
- I. Fuel system component which mixes air with fuel**
- J. Large round openings in engine block**
- K. Link between valve lifter and rocker arm on OHV engines**
- L. Routes sparks to cylinders in correct order**
- M. Closes intake and exhaust valves**
- N. Pumps fuel through fuel system**
- O. Used to crank engine for starting**
- P. 12 volt power storage unit**
- Q. Connects pistons to crankshaft**
- R. Controls engine temperature**
- S. Routes exhaust gasses to exhaust system**
- T. Electronic Ignition system control unit**
- U. Routes air/fuel mixture to cylinder head**
- V. Drives crankshaft/camshaft in correct synchronization**
- W. Releases excess oil pressure**
- X. Mounts engine in vehicle**
- Y. Routes engine coolant from radiator to engine**
- Z. Contains intake and exhaust valves**
- AA. Causes air to flow through radiator**
- BB. Charges electrical system**
- CC. Large toothed wheel linking engine to transmission**
- DD. Fires air/fuel mixture**
- EE. Surfaces that support crankshaft and connecting rods**
- FF. Pivots to open intake and exhaust valves**
- GG. Allows exhaust out of cylinder**
- HH. Develops high voltage sparks**
- II. Removes impurities from fuel**
- JJ. Pumps oil through engine**
- KK. Main engine shaft driven by pistons**
- LL. Uses vacuum to control ignition timing**
- MM. Removes heat from engine coolant**
- NN. Uses oil pressure to open and close valves**
- OO. Controls opening periods of intake and exhaust valves**
- PP. Covers top of cylinder head**
- QQ. Reservoir for lubrication system**
- RR. Reciprocating parts which fill engine cylinders**
- SS. Covers engine timing components**
